SUMMARY

Early-career Fullstack software developer with a strong foundation in React, JavaScript, and modern UI development. Experienced in building data-driven, component-based applications with an emphasis on maintainability, testing, and clean architecture. Comfortable contributing to existing codebases as well as building greenfield features from scratch. I have always had a strong passion for engineering from my Electrical studies in college to a Chemical Engineering internship, the field has always interested me. However my true passion I have discovered is with Software engineering and development.

TECHNICAL SKILLS

Languages: JavaScript, SQL, Python (UI-focused, self-directed)

Frontend: React (Hooks, Context API), React Router, HTML5, CSS3, Tailwind CSS

Backend / APIs: Node.js, Express, RESTful APIs

Databases: PostgreSQL

Testing: Vitest, React Testing Library (exposure)

Tools: Git, GitHub, Netlify, Render, Figma(exposure)

TECHNICAL PROJECTS

On The Right Track — Job Application Tracking App

Full-Stack Developer | Personal Project

Live: <https://ontherighttrack.vercel.app/> | GitHub: github.com/JosiahSayles/OnTheRightTrack

- Built a full-stack job application tracking application to manage and organize job search workflows, including application status, company tracking, and interview scheduling
- Reduced time to locate applications by implementing dynamic search and filtering features
- Designed and implemented RESTful APIs and database schema to store and manage user and application data
- Created a responsive front-end with a focus on clean UI/UX and efficient state management
- Integrated file handling for user-uploaded assets (e.g., resumes, avatars)
- Leveraged the application as a real-world solution to manage personal job search activity

Key Technologies: React, JavaScript, React Router, Tailwind CSS, Node.js, Express, PostgreSQL, Vitest

DIYMA — Full-Stack Project Management Platform

Developer | Nov 2025

Live: <https://diyma.netlify.app> | GitHub: github.com/rpower271/DIYMA-Front-End

- Built a full-stack, data-dense web application to help users plan, track, and manage complex home projects.
- Developed a scalable React frontend using functional components, hooks, and modular component architecture.
- Implemented RESTful APIs with Node.js and Express to support real-time project data, timelines, and budgets.
- Designed relational data models in PostgreSQL to manage users, projects, materials, and community content.
- Emphasized maintainable, testable code patterns and clean separation of concerns.
- Deployed production environments using Netlify (frontend) and Render (backend).

Key Technologies: React, JavaScript, React Router, Tailwind CSS, Node.js, Express, PostgreSQL, Vitest

Portfolio Website

Independent Project | Jan 2026

<https://josiah-sayles.netlify.app/> GitHub: <https://github.com/JosiahSayles/Portfolio-repo>

- Built the website using JavaScript and React, leveraging a component-based architecture to promote clean, readable, and maintainable code.
- The structure was intentionally designed for scalability, allowing new features, pages, and projects to be added efficiently as my portfolio evolves over time.

Key Technologies: React, JavaScript, React Router, Tailwind CSS3, HTML

Python UI Data Entry Application & Python UI Survey Application

Independent Project | Dec 2025

GitHub: github.com/JosiahSayles/Data_entry_ui_Python

- Designed and built a desktop UI application using Python and Tkinter with validated user input and event-driven logic.
- Structured modular UI layouts to reinforce maintainable application design.

Independent Project | Jan 2026

GitHub: github.com/JosiahSayles/Survey-UI-Python-

- Built a desktop survey application featuring structured inputs and an interactive 5-star rating system.
 - Expanded cross-language problem-solving skills beyond JavaScript-based web development.
-

EXPERIENCE

Digital Sales & Customer Service Consultant

Shane Co | Denver, CO | Sep 2019 – Jul 2025

- Collaborated cross-functionally to resolve complex customer issues and system workflows.
 - Demonstrated strong communication, prioritization, and problem-solving skills applicable to engineering teams.
 - Contributed to 20% of store revenue through customer engagement and retention strategies.
 - Applied problem-solving and workflow optimization skills transferable to software engineering environments
-

EDUCATION

Colorado State University, Fort Collins

Powered by Fullstack Academy — Software Engineering Immersive
Aug 2025 – Nov 2025

- Intensive full-stack software engineering program focused on building and deploying production-ready applications.

Colorado State University of Pueblo / Metropolitan State University

Electrical Engineering Coursework (100 credits completed)
Aug 2014 – May 2017

Colorado School of Mines — Chemical Engineering Internship

Jun 2014 – Jul 2014

- Contributed to thermodynamics simulations and applied engineering analysis with professors and graduate students.
